PROFESSIONAL SUMMARY

Technical Programme and Agile Delivery Manager with 7+ years' experience across software engineering, DevOps, Scrum Master and programme delivery roles within Barclays and Discover. Experienced in leading complex technology change across regulated financial services while building scalable ways of working across multiple engineering teams. Most recently led delivery across 7 teams supporting Capital One merger activity and multi-wave token migration readiness. Strong in programme execution, Agile coaching, roadmap and dependency management, operational readiness, process improvement and data-driven delivery.

CORE SKILLS

Agile & Delivery Leadership: Scrum, Kanban, SAFe, team coaching, self-organisation, facilitation and continuous improvement

Programme & Change Delivery: End-to-end delivery, vision and roadmap alignment, milestone planning, dependencies and controlled implementation

Governance, Risk & Readiness: RAID management, risk controls, release readiness, incident and defect coordination and post-implementation improvement

Product, Backlog & Ways of Working: PI planning, refinement, capacity planning, epic and story quality, prioritisation and Product Owner support

Performance & Continuous Improvement: Predictability tracking, cycle time reduction, Tableau dashboards, bottleneck analysis and evidence-based decisions

Stakeholder & Matrix Leadership: Engineering, Product, architecture, risk and compliance alignment, partner coordination and UK-India teams

Technical Delivery & DevOps: Software engineering background, CI/CD, cloud migration, infrastructure automation and developer support

Tools & Technology: Jira, Confluence, Miro, SharePoint and Tableau | AWS, Terraform, Jenkins, Chef, Ruby and OpenShift

PROFESSIONAL EXPERIENCE

Discover Financial Services / Capital One, Agile & Technical Programme Manager, Mar 2025 to Apr 2026

Led Agile delivery and programme execution across 7 engineering teams (~40+ engineers) within Discover's TRDC digital payments domain, supporting Capital One merger activity and multi-wave token migration readiness.

- Led complex digital payments and platform change across engineering, Product, architecture, risk and senior leadership with responsibility for roadmap alignment, dependencies, readiness and delivery outcomes
- Took over a multi-wave token migration mid-flight, closed Wave 1 remediation items and built the governance, testing and operational readiness needed for Wave 2
- Set up a scalable delivery model across 7 teams by standardising PI planning, refinement, capacity planning, release coordination and escalation routes so teams could operate with less day-to-day support
- Created process flowcharts and practical guidance for Product Owners and teams covering refinement, epic readiness and stronger story writing. Ran walkthroughs to support adoption and self-sufficiency
- Improved delivery predictability from 65% to 85%, reduced epic cycle time from 100+ days to ~55 days and increased backlog maturity to 2+ months of delivery-ready work
- Challenged the use of outdated performance data for higher migration volumes and drove renewed API stress testing and end-to-end validation which uncovered degradation and timeout risks across 4 teams
- Produced evidence-based scalability assessments for senior engineering leadership and Capital One partners, comparing expected migration demand against platform capability

- Coordinated the resolution of cross-system response mapping defects affecting digital wallet and tokenisation services, aligning remediation, testing and controlled production sign-off
 - Designed and facilitated migration game-day plans covering pre-migration, go-dark and post-migration validation, identifying missing scenarios before implementation
 - Maintained RAID governance and provided clear updates on risks, timelines, dependencies and decisions across technical teams and senior leadership
-

Discover Financial Services, Scrum Master, Mar 2024 to Mar 2025

- Coached distributed engineering teams across the UK and India, helping them improve self-organisation, ownership and delivery discipline
 - Redefined refinement from live group story writing into a clearer epic-to-story process, increasing engagement and building 2 to 3 months of ready backlog
 - Introduced delivery dashboards and regular reviews covering predictability, cycle time, bottlenecks and work in progress to support evidence-based improvement
 - Built a capacity planner using team availability and historical delivery rates, helping teams make more realistic sprint and PI commitments
 - Acted as Product Owner proxy during coverage gaps, maintaining prioritisation, backlog clarity and delivery continuity
 - Facilitated no-blame retrospectives and post-mortems including a cross-location Kafka review that led to improved cycle time and collaboration
-

Barclaycard (Barclays), Scrum Master, Apr 2022 to Mar 2024

- Led and coached 2 cross-functional application development teams delivering secure platforms within a regulated banking environment
- Improved predictability to 80%+ and reduced backlog waste by 33% through stronger refinement, workflow discipline and realistic planning
- Supported the organisation-wide move from Rally to Jira and trained teams on workflows, dashboards, JQL, board management and ticket hygiene
- Took ownership of end-to-end testing for a JBoss 6 to JBoss 7 migration, coordinating testers from 8 teams and securing stakeholder sign-off
- Worked with Product Owners, engineers, security and compliance teams to manage dependencies, implementation risk and operational readiness

Barclaycard (Barclays), DevOps Engineer / Software Engineer, Jun 2018 to Apr 2022

- Built and supported AWS-based platforms using Terraform, Jenkins, Chef, Packer, Ruby and OpenShift
 - Supported the migration of services from on-prem infrastructure to AWS, helping teams adopt new pipelines and cloud-based ways of working
 - Set up developer office hours and a support rota so teams had a clear route to raise issues, understand platform changes and request improvements
 - Worked across software engineering, infrastructure automation and CI/CD, giving me a practical understanding of how application teams build, release and support services
-

EDUCATION

BSc (Hons) Software Engineering

Bournemouth University | First Class Honours | 2014 to 2018

CERTIFICATIONS

Professional Scrum Master I (PSM I)

SAFe Practitioner (previously held)

AWS Cloud Practitioner training in progress
